

Huestis Industrial/U.S.

Huestis Industrial has launched new product lines that are cost-effective solutions that will give customers a competitive edge. Huestis air wipes continue to be industry leaders for air consumption, reducing compressed air usage, electricity and carbon-based emissions. New for 2010: the ceramic "Air Miser" air wipe, which features a full-length, replaceable ceramic insert that provides wear resistance and protection from misalignment and human error. Like the original "air miser" it provides efficient drying with low air consumption. It will be available in the most popular sizes for 2010 and expanding up to 1 in. for 2011. Also, the "Down Drafter" air wipe, an all-new device that has drying jets front and rear with a bottom drain in the center. The drain is threaded for a fitting and pipe or hose to capture and return the process liquid to your system. Multiple wipes can be coupled in line with greatly reduced blow-back, thus aiding in effective drying at high speeds. This wipe is also more effective than the standard air miser for

high speed applications. Optional metering valves are available for balancing the air flow between the front and rear jets for the most beneficial mix for each product application. The down drafter is available from 1/16 in. to 1 in. This unit also employs the "air miser" jet system that reduces the air usage and consumption. New for 2010 is the Huestis shaft-less series of take-ups and payoffs. They were designed to address the circuit-size market that has been ignored for years. These units have the ability to handle a package from 12 in. to 36 in. and weights up to 2,500 lb. Options include hydraulic, pneumatic and electric versions tailored to the customers' needs. They have a small footprint, making them ideal for movement between production lines as well as being very affordable. Also new for 2010 is the line of Huestis Industrial cold welders. They

Howard Fancher, Huestis Industrial, had multiple new products to talk about at Wire Expo 2010.

will handle all needs from superfine to rod breakdown in hand-powered manual units, as well as electric/hydraulic welders for the largest sizes, making perfect welds time-after-time, backed by the Huestis quality and warranty for one full year. **Howard Fancher, sales@huestis.com.**
