

Company Overview

Huestis Industrial is a dynamic global leader in specialized wire, cable and fiber optic machine production. ISO 9001 registered manufacturing supports a wide array of products that have earned a reputation for dependability and rugged design.

History

Huestis Machine Corporation, Bristol, RI, was founded in the 1920's as a specialty machinery supplier to local manufacturing companies. Working closely with wire and cable manufacturers, Huestis Industrial has earned a reputation for producing highly engineered machines for specialized requirements in wire, cable and tubing production. Renowned for dependability and rugged design, Huestis Industrial's success is a result of practical, innovative engineering.

ISO 9001 registered manufacturing supports the acclaimed Air Miser™ and Mini Wipe™ air wipe systems, Soundbarrier™ air wipe enclosure, Payoff and Take-up Stands, Space Saver™ buncher pay-offs, Cable Jacket Strippers, Accumulators, Spoolers and Coilers.

Recognized for expertise in custom machining capabilities, Huestis was first approached in the early 1970's to design and manufacture medical equipment used in radiation therapy. Developing opportunities successfully led to involvement with radiotherapy and diagnostic imaging applications under the Huestis Medical umbrella.

Mission

The mission of Huestis is to develop, manufacture and market reliable, cost effective medical and industrial equipment. This mission is supported by our dedication and commitment to quality. Each individual employee, at every level, takes responsibility for the company's success by respecting and understanding each other's role and its impact on our customers. Our success is dependent on delivering the highest quality product at an affordable price to meet the customers' full expectation.

Air Wipes

Huestis Industrial air wipes use precision controlled air flow to save air, reduce noise and dramatically cut energy consumption when drying various wire, cable strip, and extruded products. Air Miser™ automatically passes knots and splices and features quick-change, bracket and air disconnects to make size changes a snap. Mini Wipe™ features protective ceramic inserts for bare wire applications, while Rectangular Wipes handle strip and other profiles. All versions feature very efficient, economical and quiet operation. Custom designs are also available.

Wire, Cable and Fiber Optic

Huestis Industrial wire, cable and fiber optic handling systems are built to last. Cable jacket strippers remove jackets quickly and easily without damaging the valuable core. Take-up and pay-off stands offer roll-on, roll-off convenience allowing one person to easily load or unload reels manually by rolling them into place over the beveled edge. Space Saver™ buncher pay-off stands combine minimal footprints with bases that nest behind one another for maximum space savings. Spoolers and coilers are designed to produce neat, uniformly wound packages free of defects.

Product Overview

Huestis Industrial has earned a reputation for producing highly engineered machines for specialized requirements in various wire, cable, and fiber optic industry applications.

Renowned for dependability and rugged design, Huestis Industrial's success is a result of practical, innovative engineering and extensive in-house machining and assembly facilities including the most current CNC turning, milling, drilling and automated machining equipment. Ask about these and other custom machines designed and built to your specifications.

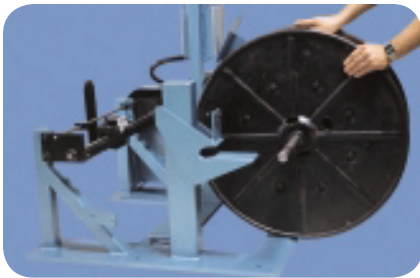

Air wipes are known for efficiency, economy, and quiet operation. They use precision controlled air flow to save air, reduce noise and cut energy consumption to dry wire, cable, strip and extrusions.

SoundBarrier™ sound and liquid containment system works with air wipes to help block noise associated with drying wire, cable and other extruded products.

Cable jacket strippers remove jackets quickly and easily without damaging the core. A stripping tool and blade work together to lift, cut and separate the jacket from bare or braided cable cores.

Take-up and pay-off stands offer roll-on, roll-off convenience. One person can easily load or unload reels manually by rolling them into place over the beveled edge.

Space Saver™ buncher pay-off stands combine minimal footprints with bases that nest behind one another for maximum space savings. Built to last, they utilize a unique, reliable tensioning system.

Spoolers and coilers are designed to produce neat, uniformly wound packages free of defects. Saving downtime, they are ideal as an inspection system that will not interrupt the process.

Accreditations / Contacts

Huestis Industrial has assembled an array of achievements and accreditations to document our commitment to quality manufacturing. Our objectives and procedures are fully documented with an impressive array of accomplishments including ISO 9001 registration.

ISO 9001 Quality

ISO 9000 Series Standards, developed by the International Organization for Standardization (IOS), fundamentally represent a company's ability to demonstrate that it has an appropriate quality management system for the products or services it offers, and that it has been audited to assure that these standards are being met.

ISO 9001 Standards are the most comprehensive standards in the ISO system. ISO 9001 pertains to companies that have functions that perform design/development, production, installation and servicing. The "ISO" name, meaning equal (as in isometric, isobar, etc.), was chosen by IOS founders for their belief that the development and use of standards would make all things equal. Huestis Industrial applies these exacting standards to its complete line to provide consistent and reliable world-class quality.

Military Standards

Performance and reliability drives Huestis manufacturing. Our quality assurance conforms to MIL-I-45208A, MIL-C-45662 and MIL-Q-9858A.

Comprehensive Users' Lists

Our customers are our best salespeople. Ask about our complete users' listings of Huestis Industrial systems.
